## EDUCATION

### Chapman University

*Bachelor of Science in Data Science, Minor in Business Administration*

Orange, CA

Aug. 2024 – May 2027

### Pasadena City College

*Associate of Science in Applied Science*

Pasadena, CA

Aug. 2022 – June 2024

## EXPERIENCE

### Full Stack Developer (Contracted Work)

June 2025 – Present

*Edward C. Ip and Associates*

*El Monte, CA*

- Developed and maintaining a full-stack web platform using modern frontend tools and Python-based backend scripts for data processing, automation, and form handling
- Integrated analytics and tracking pipelines with JavaScript and Python to monitor user behavior, conversions, and site performance, using insights to drive technical and marketing optimizations
- Analyzing website engagement and conversion data using Python to inform data-driven optimizations to site structure and marketing performance

### Office Staff Administrator

June. 2022 – Aug 2024

*Little Harvard Academy*

*Arcadia, CA*

- Achieved 100% accuracy in verifying authorized guardians for 240+ students daily by memorizing and cross-checking names and faces to ensure student safety
- Managed and reduced attendance and lunch order processing errors by 15% by implementing efficient tracking systems during summer sessions for 240+ students
- Improved tracking accuracy by 25% by utilizing Microsoft Excel to manage student payments and automate parental notifications

### Dessert Barista

June 2021 – Sept 2021

*Meet Fresh USA*

*Temple City, CA*

- Prepared 60+ menu items daily with 100% order accuracy during high-volume peak hours, coordinating with a team of 6 colleagues to boost service efficiency by 15% and proactively restocking supplies to maintain uninterrupted service

## PROJECTS

### reciKEEP | *JavaScript, Node.js, Express, PostgreSQL/Supabase*

- Built a full-stack recipe organizer that auto-fills real titles and photos from TikTok, YouTube, and recipe websites via oEmbed APIs and JSON-LD/Open Graph parsing, eliminating manual entry
- Implemented Google OAuth authentication with PostgreSQL Row-Level Security policies to isolate user data at the database level
- Deployed a security-hardened Express backend with SSRF protections, request timeouts, and payload limits, integrated with a Supabase-backed database and GitHub Pages frontend

### Thyroid Cancer Classification & BRAF V600E Mutation Prediction | *Python, PyTorch, CNNs, Transfer Learning*

- Scoping a deep learning pipeline to classify thyroid nodules (benign/malignant) from ultrasound and histopathology imaging using CNNs and transfer learning, with an explainable AI component (Grad-CAM) planned to visualize model attention
- Identifying and evaluating candidate datasets, including TCGA-THCA genomic data and thyroid ultrasound sets (TDID/DDTI), to support imaging-based prediction of BRAF V600E mutation status

### IMposter (iOS Party Game) | *Swift, SwiftUI, MVVM, Xcode*

- Designing and developing a single-device iOS party game using SwiftUI, implementing multi-screen navigation, shared game state, and dynamic player roles
- Implementing category-based game logic with randomization, imposter assignment, and replay/reset flows using observable state management
- Iteratively refining UX through simulator testing, crash debugging, and state-driven navigation fixes

## TECHNICAL SKILLS

**Programming Languages:** Java, Python, C/C++, SQL, JavaScript, HTML/CSS, Swift, R

**Speaking Languages:** English, Cantonese

**Applications:** GitHub, Microsoft Suite, Google Workspace, MongoDB
